Motivation: The Importance of Public Auctions

Auctions are a vital tool for governments to procure contracts. For construction contracts, first price sealed bid auctions are of particular importance.

- ▶ The authorities of the European Union for example spent around 14% of their GDP on public procurement in 2017 (Rodríguez et al. 2020).
- ▶ Similar observations can be made for the U.S. economy, one state of particular importance for this thesis is Colorado.
- ▶ In 2021 the Budget for Transportation in Colorado amounted to roughly \$2 billion. Out of this Budget the CDOT awarded \$790 millions worth of contracts to construct design and repair bridges and highways. All of those contracts were procured via first price sealed bid auctions.

Thesis Overview

- ▶ Provide an award price prediction model for the Colorado Department of Transportation.
 - ▶ This model would enable the auctioning entity to plan their budget more accurately.
- ▶ Unsupervised Collusion Detection
 - ▶ Examine whether the interaction of certain bidders has an effect on award prices. A significant interaction effect could allude to bid rigging schemes.

Data: Extraction

- ▶ The following text based data was extracted utilizing the package *pdftools* and regular expressions (Ooms 2022):
 - ▶ Contract ID
 - ▶ County
 - ▶ Contract Time
 - ▶ Contract Description
- ▶ The table containing the bids, the unique bidder identifiers and the engineer's estimate was extracted utilizing the R package *tabulizer* (Leeper 2018).

Data: Descriptive Statistics

Methods: Elastic Net

Results: Best Prediction Model

Unsupervised Colusion Detection: Post-Selection Inference
